Good employees are extremely hard to come by and they're hard to replace. You spend a lot of time and money to develop your top performers.

You need employees and you need to keep the ones you've got. This is a major challenge faced by owners, HR Managers, and Department Managers. With all the companies looking to poach your good employees and the multitude of job boards – what do you do?

Studies predict the cost of losing a salaried employee can cost as much as twice their annual salary, especially for a high-earner or executive-level employee.
